## Employment

**Software Engineer** **Ironclad** **May 2025 – Present**

- Build and improve distributed workflow infrastructure with Temporal, including reusable worker patterns, deployment automation, and reliability for large-scale data-processing workflows.
- Develop internal platform capabilities with Backstage, including cloud-cost insights integrating GCP, Datadog, and MongoDB Atlas.
- Improve developer setup, CI, and service deployment workflows using TypeScript/Node.js, Redis, Bazel/Aspect, Kubernetes, and GitOps.

**Senior Software Engineer** **Onest** **Sep 2024 – Apr 2025**

- Built back-end and front-end systems for personal loans in underdeveloped markets, integrating gamification and financial education to increase user engagement.
- Developed microservices in TypeScript, Node.js, and Express.js with an event-driven architecture on AWS (Lambda, S3, DynamoDB, Kafka), later migrating to Kubernetes for improved scalability.
- Created a React-based back office, a custom notification system with audit trails, and CI/CD pipelines with GitHub Actions for automated testing and deployment.

**Senior Software Engineer** **Nubank** **May 2021 – Nov 2023**

- Built the screens and flow that customers use to apply for a personal loan in the Nu application; which resulted in the release of the first MVP for Mexico and the internationalization of the services architecture that worked both for Brazil and Colombia. Clojure, Datomic, BDC, and Flutter.
- Designed, and built the architecture that would enable the backend for the issue of personal loans; this includes the creation or internationalization of services. Clojure, Kafka, Datomic, and K8s.
- Built a solution in the fraud vertical that helped to decrease in 15% the time spent by customer service to process customers that could be identified as potential fraudsters. Clojure, ClojureScript, Kafka, Datomic, and K8s.

**Senior Full Stack Engineer** **Rappi** **Jul 2019 – May 2021**

- Coaching a small team to migrate the old microservices to a new event-based architecture mainly with Kotlin (Spring Boot) and Kafka, but we also used TypeScrpit (NestJS); that resulted in a more robust infrastructure that powers the Colombian's RappiPay B2B ecosystem. PostgreSQL, Jenkins, and K8s.
- Built a solution, with Airflow and Python3, that helped in the day-to-day settlement transactions processed by RappiPay systems with Rappi's debit card. This led to an automated process and a more precise and rapid resolution to tens of thousands of support tickets for Mexico and Brasil. Pandas, Snowflake, K8s.
- Developed new features in the RappiPay vertical, which helped to stabilize the functioning of the platform and make more attractive the use of Rappi's debit card. Node.js, JavaScript with Express/Koa, PostgreSQL, and K8s.

## Education

**Mexico City** **Tec de Monterrey** **2005 – 2012**

- **M.S Computer Science**, Apr 2012. Full scholarship by CONACYT and Tec de Monterrey.
- **B.S Computer Engineering**, May 2010. CENEVAL National Prize, Egress Test (EGEL).

## Languages and Technologies

- Engilsh (Professional working proficiency); Spanish (Native).
- TypeScript; Clojure; ClojureScript; Java; Kotlin; JavaScript; Python; SQL; NoSQL.
- Unit Tests; Integration Tests; TDD; Scrum; Agile; Microservices; CI/CD; Event-Based Architecture; REPL Driven Development.
- React/Redux; Node.js; Express.js; NestJS; Jest; Kafka; PostgreSQL; DynamoDB; AWS Ecosystem; Datomic; Pedestal; Leiningen; Maven; Gradle; Spring; HBase; AngularJS; Angular 2+; Git; Docker; Jenkins; AWS (IAM, ECS, S3); K8s.

**CV with introduction, prior experience, side projects and other information here:** edblancas.github.io/cv/cv.pdf.
